EC Council – CCISO Certified Chief Information Security Officer

Days: 5

Prerequisites: In order to have a successful learning experience, students should have existing knowledge of, and support experience with, networked desktop and notebook computers, as well as advanced user-level skills in Windows Vista, Windows XP, or Windows 7 or 10.

Audience: This course is targeted to the C-Suite Level IT Professionals.

Description: The CCISO Certification is an industry-leading program that recognizes the real-world experience necessary to succeed at the highest executive levels of information security. Bringing together all the components required for a C-Level positions, the CCISO program combines audit management, governance, IS controls, human capital management, strategic program development, and the financial expertise vital to leading a highly successful IS program. The job of the CISO is far too important to be learned by trial and error. Executive level management skills are not areas that should be learned on the job.

Material in the CCISO Program assumes a high-level understanding of technical topics and doesn't spend much time on strictly technical information, but rather on the application of technical knowledge to an information security executive's day-to-day work. The CCISO aims to bridge the gap between the executive management knowledge that CISOs need and the technical knowledge that many sitting and aspiring CISOs have. This can be a crucial gap as a practitioner endeavors to move from mid-management to upper, executive management roles. Much of this is traditionally learned as on the job training, but the CCISO Training Program can be the key to a successful transition to the highest ranks of information security management.
